PROFESSIONAL SUMMARY

Detail-oriented IT professional with a background in data validation, reporting, and dashboard development. Skilled in data cleaning, visualization, and transforming raw data into meaningful insights that support business decisions. Committed to ensuring data accuracy and improving reporting processes. Seeking to apply analytical and technical skills to contribute to data-driven solutions and business improvements.

INTERNSHIP EXPERIENCE

E-Science Corporation, QA Intern

December 2025 – May 2026

- Maintained and validated Power BI and Power Apps dashboards by analyzing reports and investigating data inconsistencies using MySQL, improving the accuracy and reliability of business reporting.
- Performed data validation and analysis using Python to identify discrepancies and verify dataset accuracy, supporting reliable reporting and informed decision-making.
- Conducted API testing and database validation using Postman and MySQL to verify system functionality and data integrity, contributing to application reliability.
- Collaborated with cross-functional teams to execute functional, regression, and User Acceptance Testing (UAT), identify defects, and support timely issue resolution with developers, contributing to the successful delivery of reliable software.

EDUCATION

Bachelor of Science in Information Technology

August 2022 – July 2026

Specialization in Mobile and Web Applications

National University – Mall of Asia Campus

- Graduated Summa Cum Laude
- Consistent Dean's First Honor Lister (2022–2026)
- Doña Miguela M. Jhocson Blue Scholar (2023–2026)

TECHNICAL SKILLS

- Data Analysis & Visualization: Power BI, Excel (PivotTables, VLOOKUP, XLOOKUP, Charts)
- Database: SQL, MySQL, PostgreSQL
- Programming: Python (Pandas, NumPy)
- Tools: Git, GitHub, AWS, Postman

PROJECTS

eBarrio: A Mobile and Web Barangay Management and Disaster Response System

- Managed and developed a MERN Stack-based barangay management and disaster response system, overseeing project planning, team coordination, and frontend development. Built responsive interfaces that transformed manual barangay processes into digital workflows, supporting resident records, household management, document requests, blotter reporting, AI Analytics, and emergency response operations.

Attendance Monitoring System

- Developed a mobile-based attendance monitoring system with database integration to automate attendance recording, tracking, and report generation, improving accuracy and efficiency in attendance management.

Hotel Reservation System

- Developed a Java-based desktop application with database integration for room booking, reservation management, and customer record tracking.

CERTIFICATIONS

- IT Specialist Cybersecurity – Issued by Certiport, April 2026
- IT Specialist – Databases – Issued by Certiport, April 2026
